Organization of the Future: Design for 2035

The Challenge

The world is entering a period of profound change. Customer expectations are evolving, technology is advancing rapidly, new business models are emerging, and workforce dynamics are being redefined. Organisations that focus only on incremental improvements may remain competitive for a time; organisations that fundamentally rethink how they operate, create value and develop talent will shape the future of their industries.

Your team has been appointed as Axis Bank's Transformation Council. Your challenge is to design Axis Bank for 2035. Look beyond today's banking products, branch models and operating structures. Envision an organisation built for the future - where technology, data, talent, culture and human judgement come together to create sustainable competitive advantage. Identify one enterprise-level transformational change that could redefine how Axis Bank operates, serves customers, manages risk, develops talent or unlocks new growth opportunities.

Technology, including AI, may be a powerful enabler of your solution, but the focus should be on the organisational transformation itself and the value it creates.

Your solution should not be a collection of small improvements. It should be one bold, future-ready bet with the potential to shape the Bank's next decade.

Potential Areas to Redesign

Teams must focus on one specific organizational capability and not attempt to redesign the entire bank. The transformation may be a new business model, operating model, workforce model, customer model, AI ecosystem, distribution model, or organizational capability. The case must clearly demonstrate **how the proposed operating model will work in practice** — including roles, processes, governance, technology enablement, and adoption pathways — and **quantify the expected business impact** through relevant metrics such as revenue growth, productivity gains, cost efficiency, risk reduction, customer experience, employee experience, or financial inclusion.

Tip: Explore the Bank's public disclosures to identify key bets and transformational opportunities.

Illustrative areas:

- Customer acquisition
- Customer retention & deepening
- Customer segmentation
- Relationship management
- Wealth management
- Credit underwriting
- Risk management
- Employee experience

- People and Careers
- Operations
- Product innovation
- Data & AI ecosystems

We are not looking for:

- AI chatbot ideas
- Incremental process automation
- Product feature improvements
- Technology-only solutions without operating model change
- Solutions lacking measurable business impact

What Winning Teams Must Answer

1. What will change?

Define the future-state organization or organizational capability.

2. What business impact will it create?

Demonstrate measurable business value through a clear impact case, including baseline assumptions, success metrics, expected outcomes, and how the transformation will improve revenue, productivity, cost, risk, customer experience, employee engagement, or financial inclusion.

3. Why does it matter?

Explain the strategic problem being solved and why it is material for Axis Bank.

4. Why now?

Identify the technology, customer, market, or workforce shifts that make this possible.

5. How will it work?

Show a demonstrable operating model — roles, processes, governance, talent implications, adoption approach, and AI architecture — with enough detail to prove how the idea can function in the Bank.

Submission Format

Teams must submit a maximum **2-slide presentation (excluding title slide)**.

The pitch should communicate the idea with the same discipline expected in a Board or CEO review. Teams should prioritize clarity over detail. The strongest submissions will communicate a transformational idea with simplicity, logical structure, and compelling visuals rather than dense content.

Slide 1: The Big Bet

Students should answer:

- What is the transformational change?
- What future problem/opportunity does it solve?
- Why will it matter by 2035?
- What makes it fundamentally different from today's model?

Suggested content:

- Future vision
- Problem statement

- Strategic rationale
- One compelling visual

Slide 2: How It Works & Impact

Students should answer:

- What operating model changes?
- What role does AI play?
- How will the transformation be implemented?
- What measurable business outcomes will it create?

Suggested content:

- Operating model diagram
- Implementation approach
- Impact metrics
- Risks and mitigations

Judging Framework

Criteria	Weight
Boldness of Vision	20%
Strategic Relevance	20%
Demonstrable Business Impact	20%
Operating Model & Execution Feasibility	20%
Storytelling & Communication	20%
