

Axis Wealth Management 2035 – Case Competition Final Plan

Case Objective

Redesign only the Wealth Management organizational capability—not the entire bank. The transformation must fundamentally change the operating model, workforce, governance, processes and customer experience while using AI only as an enabler.

Big Bet

Axis Wealth Orchestration Network (AWON)

Transform Axis Wealth Management from a portfolio advisory business into a Wealth Decision Orchestration capability. Instead of merely recommending investments, Axis becomes the operating system that coordinates every significant wealth decision across investments, tax, insurance, lending, estate planning, succession and global assets.

Problem Statement

Today's wealth ecosystem is fragmented across multiple banks, brokers, advisors and asset classes. Although Axis already provides goal-based planning and personalized advisory, coordination remains relationship-manager centric, periodic and manually orchestrated.

Future Operating Model

Current: Customer → RM → Specialists → Products → Annual Review Future: Life Event / Opportunity → AI Orchestrator → Dynamic Wealth Pod → Wealth Coach → Customer Approval → Execution → Continuous Monitoring The RM evolves into a Wealth Coach focused on trust, judgement and complex conversations. AI coordinates experts and workflows instead of replacing humans.

Role Redesign

• Relationship Manager → Wealth Coach • AI → Decision Orchestrator • Specialists → Shared capability pools dynamically assembled into Wealth Pods • Governance Team → Independent oversight for suitability, compliance and AI audit

Process Redesign

1. Detect wealth event 2. Open decision case 3. Form Wealth Pod automatically 4. AI prepares scenarios 5. Human Wealth Coach validates 6. Customer approves 7. Execute 8. Continuous monitoring and closure

Governance

AI can recommend but cannot approve. Human approval remains mandatory for material decisions. Independent governance audits bias, suitability, compliance and model performance.

Technology Stack

• Wealth Knowledge Graph • Life Event Engine • Decision Engine • Workflow Orchestration • RM Copilot • Governance & Audit Layer

Implementation

Phase 1: Burgundy Private Phase 2: Burgundy Phase 3: Priority Banking Phase 4: Mass Affluent

KPIs & Business Impact

Measure: • Decision turnaround time • Customers per Wealth Coach • Goal achievement • Customer Lifetime Value • Household retention • Cross-generation retention • Financial Health Score • Net Promoter Score • Specialist utilization • Cost-to-serve Illustrative outcomes: • 5–10× RM scalability through AI-assisted orchestration • Faster wealth decision cycles • Higher customer retention and cross-product penetration • Lower operating cost while preserving human oversight

Two-Slide Submission Mapping

Slide 1 – The Big Bet: Problem, Vision, Why 2035, Future-state visual. Slide 2 – How It Works & Impact: Operating model, roles, governance, AI, implementation roadmap, KPIs and measurable business impact.
